

EventMate Features Overview

Core Features

1. Intelligent Registration System

- Smart form with progressive disclosure
- Automated data validation and enrichment
- Interest and preference capturing
- Seamless payment integration

2. Personalized Session Recommendations

- AI-powered content matching
- Preference-based suggestions
- Dynamic updates based on user behavior
- Calendar integration and scheduling

3. AI-Powered Networking Assistant

- Intelligent connection suggestions based on:
 - Shared interests and skills
 - Session attendance patterns
 - Company/industry affiliations
- Match percentage indicator for relevance
- Easy connection request management
- Multiple filtering modes for different networking goals

4. Seamless Check-in Experience

- QR code-based check-in
- Biometric authentication option
- Instant badge printing
- Welcome packet customization

Technology Stack

Frontend

- React for UI components
- SAP UI5 Web Components for React
- SCSS for styling
- Context API for state management

Backend

- Express.js server

- MongoDB for database
- JWT for authentication
- Recommendation algorithms

AI/ML Components

- Session recommendation engine
- Networking matching algorithm
- User behavior analysis

Architecture

The application follows a modern microservices architecture:

1. **Authentication Service:** Handles user registration, login, and session management
2. **Event Management Service:** Core event data and operations
3. **Recommendation Service:** AI-powered suggestions for sessions and networking
4. **Check-in Service:** Handles on-site attendance processing

Security Features

- JWT-based authentication
- Role-based access control
- Data encryption for sensitive information
- Compliance with GDPR and data privacy regulations

Deployment

The application is designed for cloud deployment with:

- Docker containerization
- Kubernetes orchestration
- CI/CD pipeline integration
- Monitoring and logging

Future Roadmap

- Real-time attendee messaging
- Virtual event integration
- Advanced analytics dashboard
- Mobile app version
